CANADA

1. The document should be revised from the lexical compliance to SC7 unified vocabulary point of view
2. The document should be revised for the compliance with Measurement Information Model (15939)
3. Inputs to this document should include measurement documents produced by other SC7 working groups (on measurements), that is from both wg12 and wg13, as well as the ISO International vocabulary of basic and general terms on metrology.

NETHERLANDS

Please check the relation to the coherence with FCD 15939 Software Measurement Process Framework. Also, in view of rapid developments in this field the final product should be TR.

USA

The USNB votes to APPROVE with comments:

- The proposed mandatory quality model is not applicable or usable in all situations
- Adherence or compliance to "theoretical concepts" is questionable
